

## Low noise Series

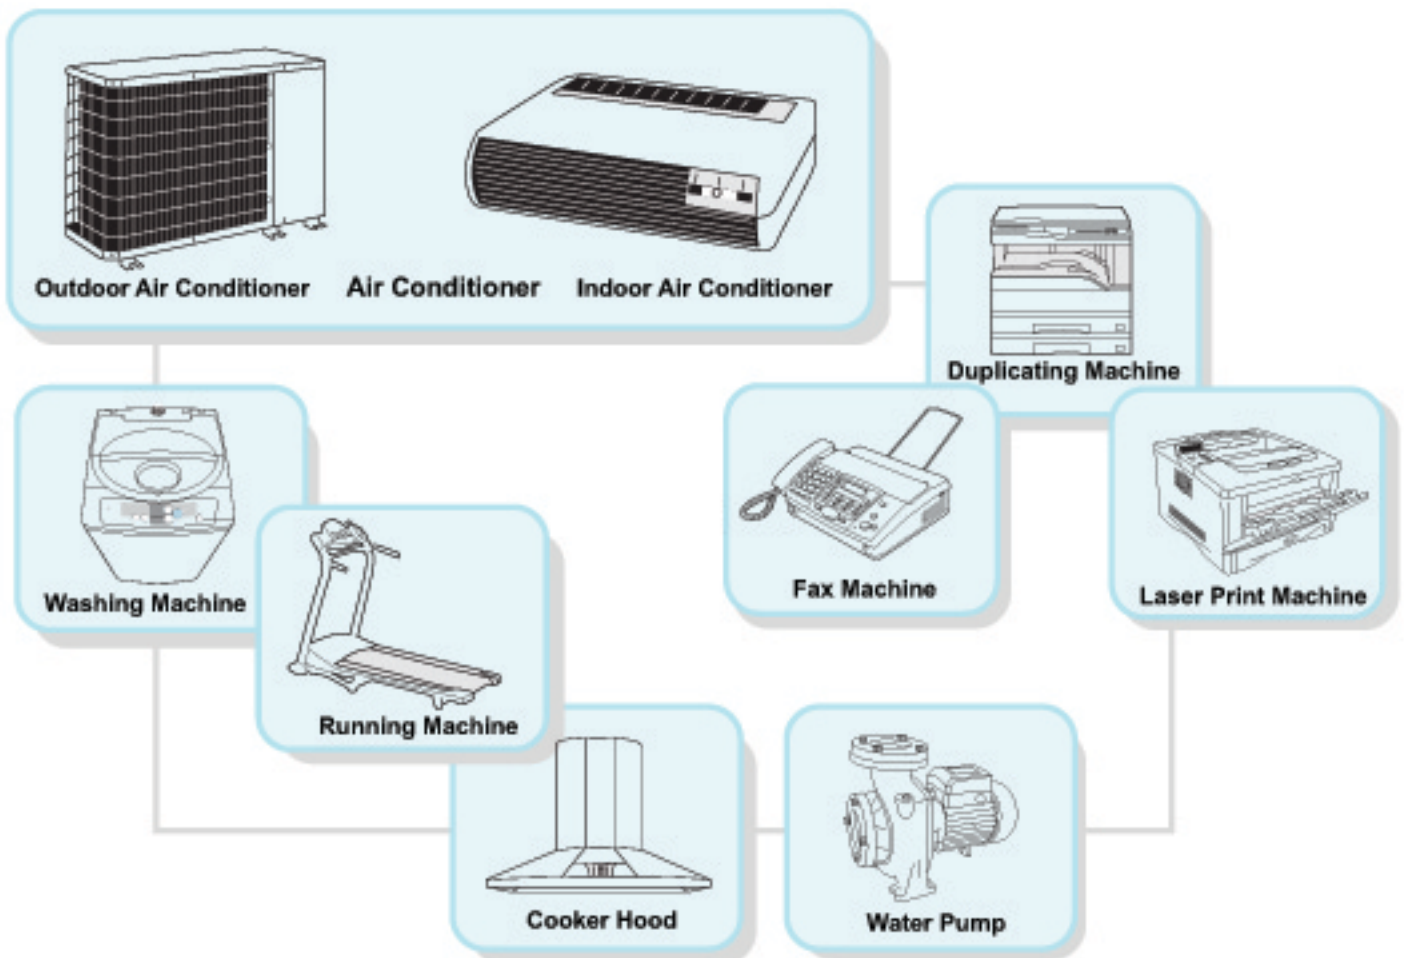

It's the main trend for electric motor bearing to be low-noise. In 2002, HCH invested more than 200 million RMB and brought in advanced Japanese production line & manufacturing technology to develop low-noise bearings. At present, HCH low noise bearings have reached the same quality level as world-famous brands' bearings.

### Main Characteristics:

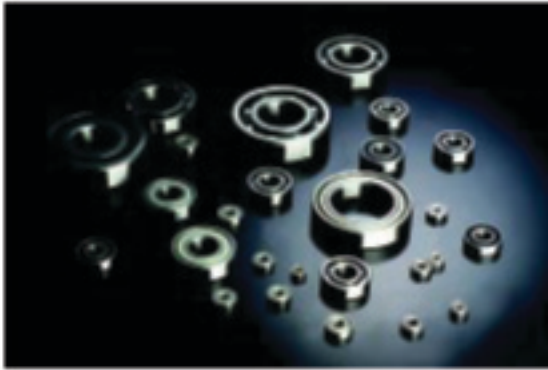

- (1) Low vibration
- (2) Dulcet timbre, without any cacophony
- (3) high accuracy
- (4) Long-maintenance of low noise
- (5) low rotating torque
- (6) Applicable for low & high temperature

## Application Scope

**Main Application:** Air Conditioner, Washing Machine, Cooker Hood, Running Machine, Water Pump, Duplicating Machine, Fax Machine, Laser Print Machine.....

## High temperature endurable & high speed series

Up against the demand of our customers dealing with Cleaners, Power Tool & Auto Parts, HCH engineers have analysed and improved the design and processing techniques of the product. Meanwhile, after strict selection of bearing parts and specific testing, HCH has successfully developed high temperature endurable and high speed bearing.

### Main Characteristics:

- (1) Be able to bear heavy load, good resistance ability of impact.
- (2) Low vibration & long fatigue life.
- (3) Applicable for tough & complicated environment & conditions.
- (4) High accuracy.
- (5) Excellent sealing to ensure long & efficient lubrication.

## Application Scope

**Main Application:** Dust Cleaner, Electric Power Tool, Automotive, Auto Power Generator .....
